

NATURAL FAMILY PLANNING

The FertilityCare Center of Reno features the Creighton Model FertilityCare System (NFP) and NaProTECHNOLOGY. NaProTECHNOLOGY is a new science of medical and surgical treatment for reproductive health issues. More than 50% of our clients come for infertility issues. Clients are able to use the method to either achieve or avoid pregnancy. The method is also helpful for those who experience reproductive issues from teens through menopause. Our staff includes a NaPro Physician and FertilityCare Practitioners.

The care that we offer follows the moral and ethical teachings of the Catholic Church. The FertilityCare Center of Reno is a tax-deductible organization. We rely on support for stipends for client fees for those who cannot afford the classes, materials, various programs for teens, engaged couples, young adults, administrative expenses, and support for programs in the rural areas.

Our goal is to provide excellent health care that diagnoses, treats, and cures reproductive health issues. By accomplishing this, women have natural health that contributes to healthy marriages. The first step is to learn the FertilityCare System. This includes an Introductory Session and eight individual follow up sessions over the first year. While the system is learned, if there are reproductive issues, a medical work-up can begin.
